

Deluxe Tree Borer Moth Trap & Lure

Directions For Assembly and Use

READ ENTIRE LABEL BEFORE USE

Eleven moths are attracted by the lure in Deluxe Tree Borer Trap:
Peach Tree, Western & Eastern Lilac, Dogwood, Rhododendron,
Sycamore, Douglas-Fir, Banded Ash, Oak, Large Red-Belted, Sequoia

LIFE CYCLE

There is a single generation per year that begins when adult females lay 400 - 900 eggs on or near tree trunks at the soil-line. Hatched larva bore for 30 to 40 days into trunks, roots, or stems creating tunnels. The pupal stage is ~20 days after which adults emerge. Within an hour of emergence females are ready to mate. The lifespan of the non-feeding adults is ~5 days.

CROP DAMAGE & TIMING OF TRAP PLACEMENT

Damage is caused when larvae tunnel into roots and trunk of trees. Infestations usually occur 1-2 feet above ground to 2-3 inches below ground.
UC Calif. says tree borer moths can be trapped almost any time during the growing season.

TRAP PLACEMENT

Traps should be placed at eye level (5-6 ft.) and about 2 feet from the outer ends of branches. Position so that there is a foliage-free space of 12-18" around the trap. For mass trapping, hang 2 traps per tree. (Only 1 per dwarf tree)

TRAP / LURE REPLACEMENT

Replace lure after 8 weeks and Trap after it becomes filled with moths or debris.

TRAP ASSEMBLY INSTRUCTIONS

1. Grasp top and bottom of the trap and pull apart. Fold perforated end inward to hold trap in a three dimensional shape as shown (see illustration)

-Grasp here and pull down to pull trap into place

-Fold ends inward

2. Open the protective packet, remove the lure. Stick the lure inside on the top of the trap.

-Place lure on inside top of trap

3. Hang the trap by placing a twist-tie hanger through the hole in the top of the trap and hang in an appropriate location. Inspect the traps regularly and remove insects and debris. Replace trap as necessary when sticky surface becomes covered with debris, dust or insect scales.

NOTES

-DO NOT hang trap below foliage canopy or closer than 4 feet to the ground.

-To prolong storage life of lure, refrigerate or freeze unused lures in their protective packet.

-If different lures are being used for other insects it is recommended that gloves or tweezers be used to handle lures so that cross contamination is avoided.

-Sticky material may be removed from fingers with cooking or mineral oil.

-To maintain trapping efficiency, the sticky material on the trap bottom may be stirred with a small stick. Debris such as leaves and moths may be removed with a stick.

-Although the surface of this trap contains no dangerous chemicals, it is extremely sticky. Therefore, keep it out of reach of children and pets.

PRECAUTIONARY STATEMENTS

Hazards to Human and Domestic Animals

CAUTION: Avoid contact of lure with skin, eyes and clothing. Wash hands thoroughly with soap and water after handling and before eating, drinking, chewing gum, or using tobacco. If irritation occurs, seek medical attention.

STORAGE AND DISPOSAL

STORAGE: Do not contaminate water, food, or feed by storage or disposal. Store in a cool dry place. Do not open until ready to use.

DISPOSAL: When lure is exhausted, wrap and dispose of it in regular trash collection. Crush cardboard box and offer for recycling or discard in trash.

NOTICE: Buyer assumes all responsibility for safety and use in accordance with directions.
