

Questions & Answers on the usage of **SLUGGO®**

What is Sluggo?

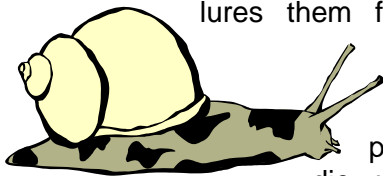

Sluggo is an organic product used to control slugs and snails. It was developed in Europe and offers an effective alternative to traditional snail and slug baits based on metaldehyde. The active ingredient in Sluggo is iron phosphate, which is actually a plant nutrient.

What are the advantages of using Sluggo?

- Sluggo can be used around pets and wildlife without fear affecting other animals.
- It remains effective after rainfall or irrigation
- It can be used in vegetable gardens throughout the growing season and up to the day of harvest
- Any product not consumed by the slugs and snails will biodegrade in the soil back to fertilizer (iron and phosphate).

How does Sluggo work?

Sluggo is attractive to snails and slugs and lures them from their hiding places. Once it is consumed they stop feeding on plant material and die within 3-6 days.

Unlike metaldehyde baits, dead snails may not be visible since they crawl back to hiding places to die. Sluggo is slower acting than other baits but once eaten plant damage will stop immediately.

Where can I use Sluggo?

Sluggo can be used in all areas in the garden; vegetable gardens, ornamental plantings, groundcovers, fruit and citrus trees, berries, lawn areas, greenhouses, etc.

Is Sluggo OMRI Listed?

Yes! Sluggo is now OMRI Listed (Organic Materials Review Institute). OMRI listed products have been reviewed against standards developed by OMRI for assessing compliance with the USDA National Organic Program (NOP) Rule (7 CFR Part 205). Sluggo is also now approved by NOP for Organic Gardening so you will see the green leaf logo on it as well

How and when should I apply?

Since snails and slugs feed mostly at night, evening is the best time to apply Sluggo. Apply bait evenly at 1 lb. per 2,000 sq. ft. which equals 1 teaspoon per 2 square yards. Re-apply bait as it is consumed. Scatter the bait around or near plants. For potted plants apply ½ teaspoon per 9 inch pot.

Is Sluggo expensive?

Sluggo is more expensive than metaldehyde baits however, you will use less bait per area. Sluggo is also labeled for use around pets and wildlife so you won't have to worry about poisoning your pets!

How is Sluggo packaged?

Sluggo is available in 1 lb. shaker cans, 2½lb. jugs, 5 lb. jugs, 10 lb. and 40 lb. bags.
