Special Precaution: Do not apply WEED STOPPER II through any type of irrigation system.

GENERAL INFORMATION

WEED STOPPER II is a preemergence herbicide which provides a long-lasting control of annual grasses and broadleaf weeds (see following list). WEED STOPPER II controls weeds by killing their seeds as they germinate. It does not control established weeds.

WEED STOPPER II is recommended for use on a wide variety of vegetables, ornamental trees, ornamental groundcovers, shrubs and flowers.

GENERAL USE PRECAUTIONS

Applied according to directions and under normal growing conditions, WEED STOPPER II will not harm the treated plant. Over application may result in plant injury or a soil residue. Uneven application of WEED STOPPER II can result in erratic weed control or plant injury. Seedling disease, cold weather, deep planting, excessive moisture, high salt concentration or drought may weaken plant seedlings and increase the possibility of damage from WEED STOPPER II. Under these conditions, delayed plant development or reduced yields may result.

SURFACE APPLICATION AND WATER INCORPORATION DIRECTIONS FOR ORNAMENTALS, VEGETABLE GARDENS AND GROUNDCOVER PLANTINGS:

Mix 3 ounces of WEED STOPPER II in 2 gallons of water and apply to 1,000 square feet. Start with clean spray tank. Fill sprayer 1/2 full with clean water, then add WEED STOPPER II. Finish filling sprayer with water and shake occasionally to keep solution mixed. Spray solution directly onto soil.
